

Protect from Leaks and Conserve Water

DROP Commercial Products are engineered for facilities and large homes with high water demand, where both water quality and cutting-edge system control are top priorities.

THE SMART WATER SYSTEM

COMMERCIAL PROTECTION VALVE

Monitoring pressure, flow, and temperature while also pairing with wireless leak detectors, the Commercial

Protection Valve from DROP offers the most all-inclusive leak protection system available.

When it comes to commercial properties, one size never fits all. The DROP Commercial line delivers innovative, custom-engineered water treatment systems designed to meet the precise, high-volume needs of your facility, regardless of size or complexity.

As leaders in smart water management, we don't just supply equipment—we design, engineer, and customize complete water systems to support performance, efficiency, and reliability for critical operations.

COMMERCIAL PRODUCTS

The DROP ProPlex Water Softener is a professional-grade smart system that provides 24/7 soft water and progressive flow to efficiently meet the fluctuating demands of modern applications, while also helping protect against costly water leaks.

One centralized display for total control.

The DROP App dashboard provides direct access to your water status, allows you to control your water, and lets you monitor usage—all in one convenient place.

The DROP App allows you to view user information and manage access to your DROP systems. If you are monitoring multiple locations, you can easily switch between DROP systems with a simple tap.

The DROP App includes a robust set of notifications to keep you informed. From leak detection to low-salt alerts, DROP keeps you informed of all system events. Notifications can be configured as push alerts, text messages, or emails.

THE DROP APP

DROP offers both web and mobile app. This gives you total control over your home's smart water system from anywhere in the world, at any time.

View everything from the custom dashboard, receive usage alerts and reports, access support, get onboarding and troubleshooting tips, change modes, access connected devices and more.

Customize your device settings quickly and easily. You can check the temperature (where supported), assign actions, and locate leak detectors. If you receive a notification about a leak, there's no need to worry. You can shut off your water directly from the app.

PRODUCT OVERVIEW

Secure your home and enjoy pure, clean water on demand. The DROP system is your complete, whole-home smart water infrastructure. It monitors usage 24/7, identifies excessive consumption, and automatically helps mitigate water damage the moment a leak occurs.

Customizable to your family's unique needs, DROP provides you total control and peace of mind.

Our family of products allows you to take control of your home's water.

Water Quality

Protection

Control

Soft Water and so much more.

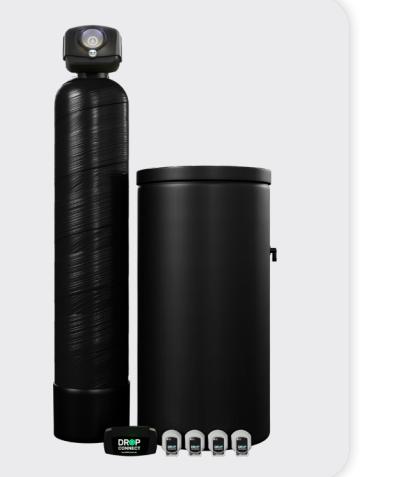

Water softeners reduce hard water, help dissolve limescale and mineral buildup in your home's pipes, and provide softer skin and hair. They also help reduce cleaning costs and extend the life of your water-using appliances. DROP smart water softeners play a key role in helping keep your home and family safe and comfortable.

DROP SMART WATER SOFTENERS

SMART SOFTENER

Need comprehensive water treatment for your home? No worries—we've got you covered. The **DROP Smart Water Softener** offers protection and excellent water quality that features easy-to-service, two-piece construction. It integrates with the DROP Hub smart water monitor and the DROP App to provide 24/7 peace of mind wherever you go.

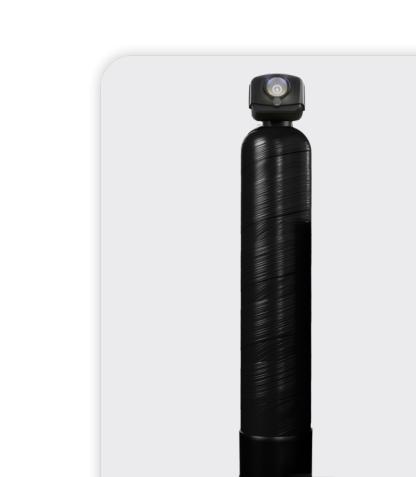

CITY SOFTENER

DROP City Water Softeners provide all the benefits of standard Smart Water Softeners, with the added ability to reduce unwanted chemicals commonly found in city water supplies, such as chlorine and chloramine. The mineral tank of a city water softener is divided into two sections. The first section is filled with catalytic carbon to reduce chemicals, while the second section contains high-performance ion-exchange resin to soften the water.

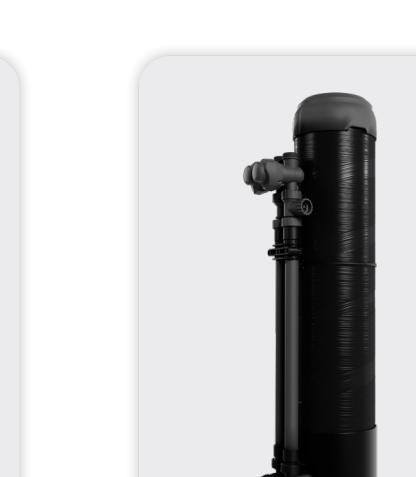

DUPLEX SOFTENER

The **DROP Duplex Smart Water Softener** is a professional-grade smart system that provides round-the-clock soft water and progressive flow to meet the fluctuating demands of a busy household while helping protect against potentially devastating leaks.

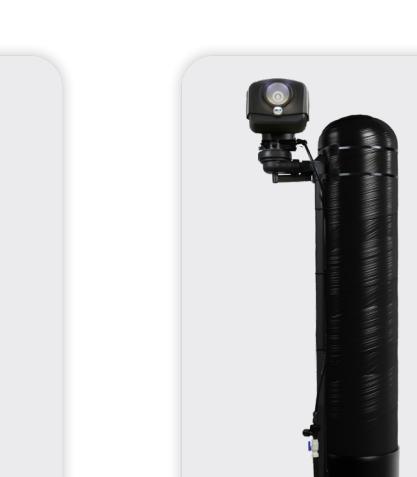

WHOLE HOUSE BACKWASHING FILTER

If you are concerned about chemical contamination and/or elevated sediment levels in your domestic water supply, the **DROP Whole House Backwashing Filter** is an excellent solution.

PIONEER DROP CARTRIDGE FILTER

The **Pioneer DROP Whole House Cartridge Filter** is a convenient way to reduce lead or arsenic in your water, while still enjoying the benefits of DROP leak protection.

SINGLE TANK AERATION FILTER

With the **DROP Single Tank Aeration Filter**, air is injected into the top of the tank, converting dissolved iron, sulfur, and manganese into filterable solids after water passes through the control valve—helping prevent valve fouling.

Give your family the pure water they deserve.

You want your family to have access to clean, great-tasting water. But with city water, you never know what contaminants and chemicals it might contain. And even well water can be tainted by agricultural and industrial runoff. Leave wasteful bottled water at the grocery store and experience life with a DROP Water Filter.

Peace of mind comes standard.

Water is weird. It can be both a supremely creative and devastatingly destructive force. That's why DROP's home protection system is designed to help you find the right balance for your family, your home, and the things in life that matter most.

HOME PROTECTION

PUMP CONTROLLER

When installed with an optional meter, the **DROP Pump Controller** monitors water flow and alerts you to excessive usage, helping prevent or reduce water damage in the event of a burst pipe or appliance leak. The **DROP Pump Controller** monitors your water usage and your pump diagnostics, providing protection for your home.

HOME PROTECTION VALVE

The **DROP Home Protection Valve** provides the ability to shut off water to the home when a problem is detected or manually through the app. Its built-in flow meter and pressure sensors can identify a broad range of problems such as continuous flow, leaky toilets, or even very small leaks from a faucet. When paired with DROP Leak Detectors through the DROP Hub, this system supports multiple methods of leak detection.

Our state-of-the-art **DROP Hub** is the heart and brain of the DROP smart water management system. It integrates your residential water treatment devices—such as water softeners and filters—with pumps, flow meters, valves, leak detectors, and more.

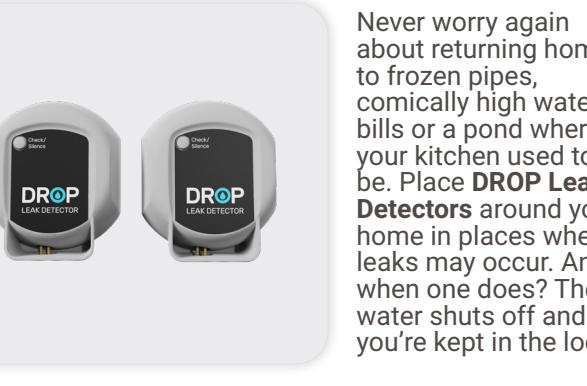

As powerful as it is simple, the **DROP Salt Sensor** lets you know when to add salt to your DROP Water Softener before you run out and comes standard with all DROP Softeners.

Complete Water Control

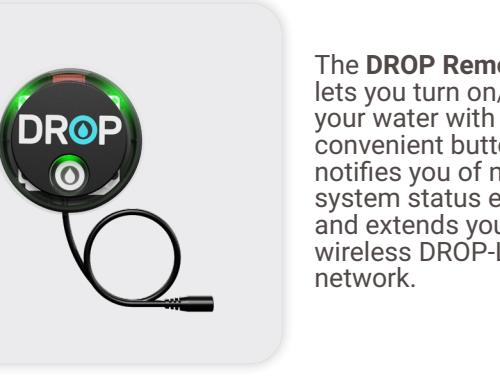

DROP monitors water flow, detects leaks through leak detectors and metering, and takes immediate action when an issue is detected.

DROP reports and displays water usage, detects leaky faucets or toilets, and notifies you of abnormalities—allowing you to correct issues and reduce water consumption.

Connecting DROP to Wi-Fi allows you to modify the system and receive notifications from anywhere.

Never worry again about returning home to frozen pipes, comically high water bills or a pond where your kitchen used to be. Place **DROP Leak Detectors** around your home in places where leaks may occur. And when one does? The water shuts off and you're kept in the loop.

The **DROP Remote** lets you turn on/off your water with a convenient button, notifies you of new system status events, and extends your wireless DROP Li nk network.
